(54) **INSULATING MATERIAL FOR JAMMING BETWEEN DELIMITING  
Title STRUCTURES**

(57) Abstract

An *insulating material*, especially a line of *insulating material* (10), is used for jamming between delimiting structures. Said *insulating material* comprises at least one first section (14) extending in the longitudinal direction of the *insulating material*, whose width corresponds essentially to the thickness of the *insulating material*; and at least two second sections extending in the longitudinal direction of the *insulating material*, whose width is greater than that of the first sections. The at least two second sections (16) have a fold-type cut (18) which extends in the longitudinal direction of the *insulating material* and which does not completely separate the second sections (16). The at least one first section (14) can be separated from an adjacent first section (14) or a second section (16) by means of a *perforation* line extending in the longitudinal direction or a separating cut (16).
